## Subject index

Aerospace
  development of Al alloys . . . 2–52-57
Aerospace applications
  for Al P/M products . . . 4–44
Aluminum alloys
  aerospace developments . . . 2–52-56
  development of alloys in the short-transverse direction . . . 2–52-54
  development of alloys with high resistance to exfoliation corrosion . . . 2–52-54
  development of alloys with improved toughness and short-transverse ductility . . . 2–54-54
  development of weldable alloys for cryogenic applications . . . 2–55
  future developments . . . 2–56-57
  past developments . . . 2–52
Aluminum alloys, specific types
  Al-Zn-Mg-Cu-Co
    Al P/M products . . . 4–37-44
  Alloy 201
    corrosion . . . 2–39-44
  2021
    deformation . . . 2–62-63
    effect of anisotropy on formability . . . 2–58-64
  2024
    deformation . . . 2–62-63
    effect of anisotropy on formability . . . 2–58-64
  2219
    deformation . . . 2–62-63
    effect of anisotropy on formability . . . 2–58-64
  6061
    deformation . . . 2–62-63
    effect of anisotropy on formability . . . 2–58-64
  7049
    development for aerospace . . . 2–53
  7050
    development for aerospace . . . 2–53-54
  7075-T6
    development for aerospace . . . 2–53
  7175-T736
    development for aerospace . . . 2–53
  7178-T6
    development for aerospace . . . 2–53
Aluminum powder metallurgy products
  aerospace applications . . . 4–44
  fatigue . . . 4–42-43
  fracture toughness . . . 4–41-42
  in Al alloys . . . 4–37-44
  ordnance applications . . . 4–43-44
  stress corrosion . . . 4–38-41
  strength . . . 4–38-41
Anisotropy
  effect on formability in Al alloys . . . 2–58-64
  effect on splitting . . . 1–30-31
  effect on toughness and ductility . . . 3–44-46
  in Al alloys . . . 2–58-64
Annealing
  in Cu alloys . . . 3–13
Antiscuffing
  of compound layer in salt baths . . . 2–5-6
Arctic applications
  steel for . . . 3–26-28
Backscatter compositional mode analysis
  for evaluation of electrical steel sheets . . . 2–51
Bend tests
  on steel weldments . . . 4–2-3
Beryllium powders
  consolidation, extrusion, and rolling . . . 4–46
  ductility . . . 4–50-51
  effects of oxide and grain size . . . 4–54-55
  elevated temperature properties . . . 4–55
  mechanical properties . . . 4–50
  microstructure . . . 4–46-49
  strength . . . 4–52-54
  texture . . . 4–55-56
Billets
  examination of three-dimensional strain distribution by photoplasticity . . . 2–21-27
Brittle fractures . . . 3–32-36
Butt welds
  mechanical properties . . . 4–13-14
Carburized hardenability
  lowering by complex carbide network . . . 4–57-61
Carburizing steels
  effect of alloying elements . . . 2–14-16
  new developments . . . 2–16-20
Case hardening, progress in . . . 2–1-13, 2–13-20
Casting
  effect on toughness and ductility . . . 3–49
  of steels . . . 1–1
Central bursts
  in hydrostatic extrusion . . . 1–46-58
Charpy impact test
  on steel weldments . . . 4–4-5
Chemical analysis
  effect on toughness and ductility . . . 3–42-44
Cleanliness
  effect on toughness and ductility . . . 3–44
Coatings
  analysis of fracture surface . . . 2–51
  backscatter compositional mode analysis . . . 2–51
  defects . . . 2–50-51
  evaluation on electrical steel sheets . . . 2–44-51
Coiling temperature
  effect on steel sheets . . . 1–14-15
Cold working
  in Cu alloys . . . 3–12-13

stress-rupture . . . 3–1,2, 6,7
tensile strength . . . 3–3
thermal conductivity . . . 3–2, 8
yield strength . . . 3–4
Copper alloys, specific types
Cu-Al
applications . . . 3–14
development of dispersion strengthened alloy . . . 3–10,11
effect of annealing . . . 3–13
effect of cold work . . . 3–12,13
effect of dispersoid content . . . 3–11,12
effect of extrusion ration . . . 3–12
elevated-temperature properties . . . 3–13,14
Corner welds
mechanical properties . . . 4–13,14
Corrosion
of Al alloys . . . 2–39,44
Cost
of Cu alloys . . . 3–9
of steels . . . 1–8,9
Crack length
of steel weldments . . . 4–19
Creep
of Cu alloys . . . 3–1,2, 5,6
tests on steel weldments . . . 4–8,9
Crucible test method
effect of alloying elements . . . 3–18,19
research and development of . . . 3–16,19
Cryogenics
development of Al alloys . . . 2–55
Defects
in plated pins for printed circuits . . . 3–24,26
Deformation
in Al alloys . . . 2–62,63
in billets . . . 2–21,27
Delta test
on steel weldments . . . 4–7
Design
effect on toughness and ductility . . . 3–39
Diffusion zone
in nitrocarburizing . . . 2–10,11
Dimensional stability
of Cu alloys . . . 3–8
Dispersion strengthening
of Cu alloys . . . 3–10,15
Ductile deformation failures . . . 3–31
Ductile fractures . . . 3–31
Ductility . . . 3–36
development in Al alloys . . . 2–54,55
factors affecting . . . 3–38,58
of Be powders . . . 4–50,51
Dynamics
of splitting . . . 1–27,28
Electric arc heaters . . . 2–28,29
Electrical conductivity
of Cu alloys . . . 3–2, 6,8
Electrical steel sheets
analysis of fracture surface . . . 2–51
backscatter compositional mode analysis . . . 2–51
defects of coatings . . . 2–50,51
evaluation of coatings . . . 2–44,51
Elongation
of Cu alloys . . . 3–4, 6
Embrittlement
effect on toughness and ductility . . . 3–55,58
Environmental effects
effect on toughness and ductility . . . 3–58
Exfoliation corrosion
in Al alloys . . . 2–52,54
Extrusion
of Be powders . . . 4–46
Extrusion ratio
in Cu alloys . . . 3–12
Fatigue
in nitrocarburizing . . . 2–10,11
of Al P/M products . . . 4–42,43
Fatigue precracking
of steel weldments . . . 4–17
Fatigue resistance
analytical study of spotwelds . . . 4–26,36
Fatigue tests
on steel weldments . . . 4–9,10
Ferritic nitrocarburizing
composition and structure of compound layer . . . 2–2,3
controlled nitrocarburizing . . . 2–7,8
diffusion zone characteristics . . . 2–10,11
fatigue properties . . . 2–10,11
gaseous nitrocarburizing . . . 2–6,7
nitemper process . . . 2–7
nitroc process . . . 2–8
nontoxic salt bath nitrocarburizing treatments . . . 2–4,5
salt bath nitrocarburizing treatments . . . 2–1,2
soft nitriding process . . . 2–8
triniding . . . 2–8
vacuum nitrocarburizing . . . 2–8,10
wear and antiscuffing of compound layer . . . 2–5,6
Ferrochrome production . . . 2–29,30
Forging
of spiral bevel gears . . . 1–58,64
Formability
effects due to anisotropy in Al alloys . . . 2–58,64
of high strength steels . . . 3–29,30
of steel sheets . . . 1–15,19
Forming
effect on toughness and ductility . . . 3–54,56
Four-point loaded bend test
of steel weldments . . . 4–7,8
Fractography
of steel weldments . . . 4–19,20
Fracture
analysis of coatings on electrical steel sheets . . . 2–51
in steels . . . 1–22,32
Fracture mechanics . . . 3–37,38
Fracture toughness
of Al P/M products . . . 4–41,42
tests on complete joints . . . 4–7
Gaseous nitrocarburizing . . . 2–6,7
Grain refining
effect on strength and toughness in steels . . . 1–1,2
Grain size
effect on Be powders . . . 4–54,55
effect on toughness and ductility . . . 3–44
Heat treatment
effect on splitting . . . 1–28
effect on toughness and ductility . . . 3–49, 54
of steels . . . 1–1
High-strength steels, progress in . . . 1–1, 10; 1–10,22; 1–22,32
Hot-work-hardening coefficient
for Ni alloys . . . 2–30,38
Hot working
effect on toughness and ductility . . . 3–49
Hydrostatic extrusion
central burst formation . . . 1–46,58
Incident beam energy
for evaluation of coatings on electrical steel sheets . . . 2–47,48
International System of Units . . . 3–62,64
Line-pipe steels
splitting fractures . . . 1–22,32
Machining
effect on toughness and ductility . . . 3–54
Macrostructure
of Ti alloys . . . 1–37,40
Material variables
effect on toughness and ductility . . . 3–42,58
Mechanical properties
effect on splitting . . . 1–30
of Be powders . . . 4–50
of butt steel weldments . . . 4–13,14
of Cu alloys . . . 3–3
of corner steel weldments . . . 4–13,14
of steel sheets . . . 1–10,22
Melting
of steels . . . 1–1
Microstructure
effect on strength and toughness in steels . . . 1–6
in steel splits . . . 1–25,27
of Be powders . . . 4–46,49
of laminar composite steel weldments . . . 4–13,14
of Ti alloys . . . 1–33,36, 39,40
Nickel alloys
hot-work-hardening coefficient . . . 2–30,38
Nickel alloys, specific types
Inconel 600
hot-work-hardening coefficient . . . 2–33,38
Inconel 625
hot-work-hardening coefficient . . . 2–33,38
Inconel 718
hot-work-hardening coefficient . . . 2–33,38
Nickel superalloys
historical development . . . 3–15,16
Nickel superalloys, specific types
IN-939
development . . . 3–23
MA 755E
development . . . 3–19,21
Nitemper process . . . 2–7

Nitroc process . . . 2–8
Nonferrous alloys, progress in . . . 3–1-9; 3–10-15; 3–15-24
Nonmetallic inclusions
  effect on strength and toughness in steels . . . 1–7-8
Nontoxic salt bath nitrocarburizing treatments . . . 2–4-5
Notch sensitivity
  effect on toughness and ductility . . . 3–39
Notch toughness tests . . . 4–3-9
  Charpy impact test . . . 4–4-5
  compact tension tests . . . 4–5-6
  creep tests . . . 4–8-9
  Delta test . . . 4–7
  four-point loaded bend test . . . 4–7-8
  fracture toughness tests on complete joints . . . 4–7
  limitations of zone testing . . . 4–6-7
  on steel weldments . . . 4–3-9
Ordnance applications
  for Al P/M products . . . 4–43-44
Orientation
  of steel weldments . . . 4–19
Oxidation
  of Cu alloys . . . 3–9
Oxides
  effect on Be powders . . . 4–54-55
Photoplasticity
  for determining three-dimensional strain distribution in billets . . . 2–21-27
Plasma heating devices . . . 2–27-30
Plated pins
  bend ductility tests . . . 3–24
  defects . . . 3–25
  twist test . . . 3–24
Precipitation hardening
  in Cu alloys . . . 3–2-3
Precipitation strengthening
  effect on strength and toughness in steels . . . 1–3-5
Printed circuit boards
  mechanical tests for defects in plated pins . . . 3–24-26
Processing
  effect on toughness and ductility . . . 3–46-49
Salt bath nitrocarburizing . . . 2–1-2
Salt shower test
  effect of alloying elements . . . 3–22-23
  European Research and Development Centre . . . 3–21-23
Size
  effect on steel toughness and ductility . . . 3–39
Soft nitriding process . . . 2–8
Solid solution strengthening
  effect on strength and toughness in steels . . . 1–5-6
Spiral bevel gears
  economics . . . 1–62
  mechanical tests . . . 1–61-62
  metallurgical structure . . . 1–62-63
  precision forging . . . 1–58-61
Splitting
  anisotropy . . . 1–30-31
  dynamics . . . 1–27-28
  effect of heat treatment . . . 1–28
  effect of rolling . . . 1–28-32
  effect on mechanical properties . . . 1–30
  factors that affect splitting . . . 1–31-32
  in steels . . . 1–22-32
  microstructure . . . 1–25-27
  types . . . 1–23-25
Spotwelds
  analytical study of fatigue resistance . . . 4–26-36
Stainless steel strap joints, specific types
  Type 316
    stress-rupture tests . . . 4–21-25
    tensile tests . . . 4–22-25
Static strength tests . . . 4–2-3
  bend tests . . . 4–3
  on steel weldments . . . 4–2-3
  tension tests . . . 4–2-3
Statistics
  use in reducing yield loss in steel mill . . . 1–41-45
Steel mills
  recution of yield loss through statistics . . . 1–41-45
Steel sheets, high-strength, specific types
  Mn-Mo-Cb
    development of heavier gage strip . . . 1–20-21
    effect of coiling temperature . . . 1–14-15
    effect of compositional variables . . . 1–10, 13-14
    formability . . . 1–15-19
    mechanical properties . . . 1–10-22
  • weldability . . . 1–20
Steel weldments
  fatigue tests . . . 4–9-10
  notch toughness tests . . . 4–3-9
  static strength tests . . . 4–2-3
Steel weldments, laminar composite
  mechanical properties for butt welds . . . 4–13-14
  mechanical properties for corner welds . . . 4–13-14
  microstructure . . . 4–13-14
Steel weldments, specific types
  Ni-Cr-Mo
    effect of crack length and orientation . . . 4–19
    effect of yield strength and potential . . . 4–18-19
    fatigue precracking . . . 4–17
    fractography . . . 4–19-20
    stress-corrosion cracking . . . 4–15-20
Steels
  casting . . . 1–1
  cost . . . 1–8-9
  factors that affect strength and toughness . . . 1–1-8
  heat treatment . . . 1–1
  melting . . . 1–1
  rolling . . . 1–1
  weldability . . . 1–8
Steels, specific types
  0.1C-0.6Mn-1Ni-1Cr-0.3Mo
    development for Arctic applications . . . 3–26-28
  0.05C-4Mn
    development . . . 3–29-30
    properties . . . 3–29-30
  94B17H
    carburized hardenability . . . 4–57-61
Strain distributions
  in billets . . . 2–21-27
Strength
  effect of grain refining . . . 1–1-2
  effect of microstructure . . . 1–6-7
  effect of nonmetallic inclusions . . . 1–7-8
  effect of precipitation strengthening . . . 1–3-5
  effect of rolling . . . 1–6-7
  effect of solid solution strengthening . . . 1–5-6
  of Al P/M products . . . 4–38-41
  of steels . . . 1–1-8
Stress corrosion
  of Al P/M products . . . 4–38-41
Stress-corrosion cracking
  in Al alloys . . . 2–52-54
  of steel weldments . . . 4–15-20
Stress rupture
  of Cu alloys . . . 3–1-2, 6-7
  tests of stainless steel strap joints . . . 4–21-25
Stress system
  effect on toughness and ductility . . . 3–38-39
Tensile strength
  of Cu alloys . . . 3–3
Tensile tests
  of stainless steel strap joints . . . 4–22-25
Tension tests
  on steel weldments . . . 4–2-3
Texture
  of Be powders . . . 4–55-56
Thermal conductivity
  of Cu alloys . . . 3–2, 8
Thermal properties
  of Be powders . . . 4–55
Titanium alloys, specific types Ti-11
  macrostructure . . . 1–37-40
  microstructure . . . 1–33-36, 39-40
Toughness
  development in Al alloys . . . 3–36
  effect of grain refining . . . 2–54-55
  effect of microstructure . . . 1–1-2
  effect of nonmetallic inclusions . . . 1–7-8
  effect of precipitation strengthening . . . 1–3-5
  effect of rolling . . . 1–6-7
  effect of solid solution strengthening . . . 1–5-6
  factors affecting . . . 3–38-58
  of steels . . . 1–1-8
Triniding . . . 2–8
Vacuum nitrocarburizing . . . 2–8-10
Wear
  of compound layer in salt baths . . . 2–5-6
Weldability
  of high strength steels . . . 3–29-30
  of steel sheets . . . 1–20
  of steels . . . 1–8
Welding
  effect on toughness and ductility . . . 3–54
  progress in . . . 4–1-10; 4–11-15; 4–15-20; 4–21-25; 4–26-36
Workmanship
  effect on toughness and ductility . . . 3–42
Yield loss
  reduction of by statistics in steel mill . . . 1–41-45
Yield potential
  of steel weldments . . . 4–18-19
Yield strength
  of Cu alloys . . . 3–4
  of steel weldments . . . 4–18-19
Zone testing
  limitations on steel weldments . . . 4–6-7
